ISBN: 978-3-96245-224-7

€99.00 *

Prices incl. VAT but exclude shipping costs

The railway system is developing at high speed: "Deutschlandtakt" and digitalisation, sensor technology, hybrid drives and environmental friendliness are current topics. As a result of the interoperability of the railways in the European Community (EU), the railway system has changed profoundly - not without impact on the handbook "The Railway System". The 3rd edition, a fundamental new version, provides up-to-date information with a holistic system view by 28 expert authors (including 12 new, experienced experts) from the fields of science, industry, market research and railway companies. Theory and practice go hand in hand. Current topics, many of them completely new, cover: EU directives and planning processes in the context of interoperability Technology and digital strategy of DB Systemtechnik Building Information Modelling (BIM) Rail vehicles (including new developments) Vehicle maintenance (ECM, basics and current examples) Safety in railway operations (CSM, basics and current examples) HGV systems worldwide (networks and trains) Mountain and cable railways. This new edition of the handbook "The Railway System" provides planners, developers, manufacturers and...
