Preface

1. Introduction
   1.1 Historical Abstract
   1.2 Scope of this Book
   1.3 Characteristics of Railway Systems
   1.4 Safety of Rail Traffic
   1.5 Definitions
   1.6 Protective Functions
   1.7 The Control Loop
   1.8 Attempts for Unification of Signalling

2. Safety and Reliability in Signalling Systems
   2.1 Overview of Regulations & Standards of Safety and Security
   2.2 Safety Basics
   2.3 Railway Operation/Safety referring to EN 50129
   2.4 Security Principles in Railway Operation / Security

3. Railway Operation Processes
   3.1 Historical Background
   3.2 Classification of Tracks, Stations and Signals
   3.3 Movements with Railway Vehicles
   3.4 Principles of Train Separation
   3.5 Dispatching Principles
   3.6 Special Operation Situations

4. Interlocking Principles
   4.1 Overview
   4.2 Element Dependences
   4.3 Routes
   4.4 Block Dependences
   4.5 Degraded Mode Operation

5. Detection
   5.1 Requirements and Methods of Detection
   5.2 Technical Means of Detection
   5.3 Track Circuits
   5.4 Axle Counters
   5.5 Comparison of Track Circuits and Axle Counters
6. Movable Track Elements

6.1 Kinds of Movable Track Elements and their Geometry
6.2 Safety Requirements at Movable Track Elements
6.3 Track Clear Detection at Points and Crossings
6.4 Point Machines
6.5 Point Locking Mechanisms
6.6 Circuitry of Point Operation and Control in Relay Technology
6.7 Point Diagnostics

7. Signals

7.1 Requirements and Basic Classification
7.2 Signals with Filament Lamps
7.3 LED Signals
7.4 Optical Parameters
7.5 Retro-Reflection of Passive Signal Boards
7.6 Principles of Signalling by Light Signals
7.7 Redundancy and Degraded Mode Operation
7.8 Signal System Examples

8. Train Protection

8.1 Requirements, Classification and Conditions for Application
8.2 Technical Solutions for Data Transmission
8.3 Particular Systems
8.4 ETCS
8.5 CBTC
8.6 PTC

9. Interlocking Machines

9.1 Classification
9.2 Mechanical Interlocking
9.3 Relay Interlocking
9.4 Electronic Interlocking
9.5 Hybrid Technologies

10. Line Block Systems

10.1 Classification
10.2 Safety Overlays for Systems with Safety Responsibility at Staff
10.3 Decentralised Block Systems
10.4 Centralised Systems for Safety on Open Lines
10.5 Moving Block Systems

11. Remote Control and Operation Technology
12. Safety and Control of Shunting and Marshalling

12.1 Principle of Marshalling of Trains
12.2 Parts of Marshalling Yards and their Function
12.3 Control of Marshalling Yards

13. Level Crossings

13.1 Requirements and Basic Classification
13.2 Static Roadside Signs
13.3 Passive Level Crossings
13.4 Active Level Crossings
13.5 Removal of Level Crossings

14. Hazard Alert Systems

14.1 Hazard in Railway Systems
14.2 Solutions for Hazard Detection
14.3 Aspects of Application

Glossary
Explanation of Symbols in Track Layout Schemes
The Authors
Index
